

MY GREEN MICHIGAN

Full-circle composting solutions

ABOUT US COMPOSTING SERVICES

WHY CHOOSE US?

My Green Michigan is now happy to offer full service compost solutions for your business or event. We are proud to offer the following services:

- zero-waste education and **training** for employees
- zero-waste **consulting** on waste reduction
- **signage** for your carts and cans
- compostable products via our partnership with **World Centric products**
- complete **cost analysis**
- weekly to multi-week **cart service** via 64 gallon carts

WE ACCEPT:

- yard waste
- pre/post consumer food waste
 - vegetable & fruit scraps
 - baked goods
 - meat & bones
 - dairy
- bathroom towels & tissues
- unlined & unprinted cardboard
- coffee & tea grounds
- World Centric certified compostable products

NO ANNUAL CONTRACT NEEDED! BUT WE REQUIRE:

- 3 month commitment to start service
- 30 day notice for change or cancellation of service
- one time \$20 delivery/rental fee per cart

Please contact us for more information or to schedule a consultation!

MyGreenMichigan@gmail.com • (248) 982-7024

Please note there will be a written warning upon the first notification of contamination, a \$35 fine on the second notification of contamination, and My Green Michigan will reserve the right to a second fine or termination of service on the third notification of contamination.

ABOUT US COMPOSTABLE PRODUCTS

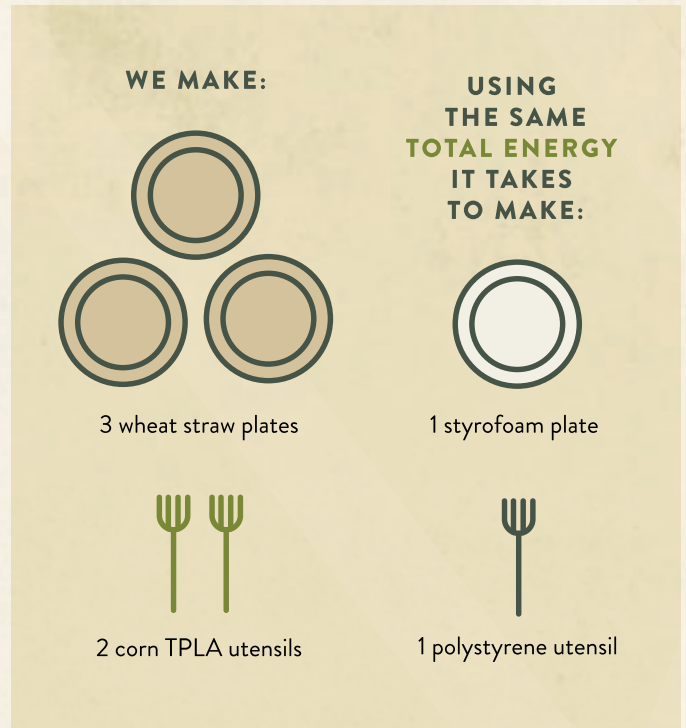

WHY SWITCH TO OUR PRODUCTS?

Made from **annually renewable** plants like sugarcane fiber, corn, and wheat straw instead of non-renewable petroleum (plastics & styrofoam).

Sugarcane fiber and wheat straw products are the most sustainable as they are made from discarded agricultural by-products.

Plastic and styrofoam are derived from petroleum and create pollution and toxicity during production, use, and disposal. Compostables come from plants. They are non-toxic, non-polluting, and reduce waste going into landfills. They biodegrade in a commercial composting system and produce nutrient-rich soil in 3-4 months, while plastics and styrofoam persist for hundreds of years in the environment.

Our products use less energy to produce than petroleum based products and reduce greenhouse emissions, lessening the impact of global warming.
